

# PolicyGoal:

## Science-based, Technologically Achievable, and Economically Reasonable Environmental Regulations

### Effective environmental standards and regulations:

- Provide clarity, predictability and consistency
- Are based on scientific consensus
- Provide for common sense enforcement
- Incorporate careful cost-benefit analysis as part of the policymaking process

Manufacturers urge policymakers to exercise restraint in establishing state environmental regulations that exceed federal standards, and to avoid doing so altogether without clear and convincing evidence that more stringent regulations are necessary. At the same time, manufacturers understand that fair and reasonable regulations must be balanced with responsible stewardship of our natural resources.

Manufacturing leads the way in innovation in solid waste reduction and recycling. Industry is an enormous consumer of recycled materials, such as metals, glass, paper and plastics; manufacturers thus are strong advocates for improving recycling systems in Ohio and the nation.

The state should expand opportunities for industry to reuse non-harmful waste streams. Beneficial reuse policies can result in less waste and more recycling of industrial byproducts. Likewise, Ohio should continue to expand recycling programs that provide feedstock for the state's industrial processes.

The Ohio Environment Protection Agency, in designing state implementation plans for new federal regulations (such as Clean Power Plan, Ozone regulation and Waters of the U.S.), should use a transparent process of stakeholder involvement, supplemented by investment in independent research to determine least cost, scientifically sound and technologically feasible implementation plans.
