

Considerations for Demographic Data

SAMHSA ★ SMVF TA CENTER
Service Members, Veterans, and their
Families Technical Assistance Center

Data regarding Veteran population in states and counties can be valuable to help target outreach efforts as well as consider how different programs may be applied throughout the state. It is important to note that publicly available data from the US Census and the VA National Center for Veteran Analysis and Statistics (NCVAS),

While this data can be beneficial, has a number of limitations:

- Data presented is not a statistical projection, and may not align with state-level data, census data, or other analysis.
- The data presented includes permanent residents of the state and counties, and likely does not include seasonal or transitory residents
- This data does not include currently serving military, including currently serving Guard and Reserve. It is unlikely to also include former Guard and Reserve service members who were not activated during their period of service. This information does also not include current or former military or veteran family members
- Race and Ethnicity data for the veteran population is publicly available at the State level, not at the county or community level
- On the State County map, the total veteran population is indicated for each county. Examples of more specific information for counties with the highest number of veteran population are included.
- Broad age divisions for the county-based data are presented according to publicly available data from the VA's NCVAS
- LGBTQ+ population by state or county is not currently publicly available through either the US Census or the NCVAS

Questions for Consideration

SAMHSA ★ SMVF TA CENTER
Service Members, Veterans, and their
Families Technical Assistance Center

As we discuss the data on the following three pages, here are some possible questions for you or your team to consider

- Is there any data that is surprising to you, or is there any data that confirms your understanding of particular communities as it relates to age, race, ethnicity, and gender?
- Based on percentages and numbers of race and ethnicity, are there populations of veterans in your state that your team can focus on?
- Of the most populous veteran communities, which have the highest numbers of women veterans, and what are the most prevalent ages? What characteristics of women veterans of different age groups should be considered?
