

2025 OHIO MANUFACTURING COUNTS

The Economic Impact of Ohio Manufacturing

Thank you to our sponsors:

ohiomfg.com

FACTS ABOUT OHIO MANUFACTURING'S ECONOMIC IMPACT

Ohio is a manufacturing powerhouse for the United States and the rest of the world. The sector is responsible for **16.5%** of Ohio's Gross Domestic Product (GDP) as of 2024, leading among Ohio's 19 private economic sectors. The manufacturing sector contributes to Ohioans' quality of life by providing:

- A payroll totaling **\$49.9 billion**, the highest total annual wages of any Ohio sector;
- **\$55.8 billion** in exported products to **210** countries and territories; and
- A **cleaner environment** through decreased emissions and increased recycling.

Ohio remained **third in the nation** in total manufacturing jobs, at **687,345** in 2023 – trailing only California and Texas, both of which have significantly larger populations than the Buckeye State.

As of 2024, Ohio's manufacturing GDP was **\$137.9 billion**, ranking **fifth in the nation**. Previously, Ohio trailed only California, Texas, and Illinois. Indiana overtook Ohio very slightly in 2024 at \$138.7 billion in manufacturing GDP.

In 2024, durable goods manufacturing accounted for **53% (\$70.0 billion)** of all production, while nondurable goods made up **47% (\$61.1 billion)** of production.

The average annual pay for Ohio manufacturing workers in 2023 was **\$76,493**. Their average hourly earnings were **\$33.12** as of 2024.

The Ohio Manufacturers' Association (OMA) prepares Manufacturing Counts to help Ohioans understand the importance of manufacturing to the state's economic future. The data in this publication were the most current available as of June 2025.

The OMA thanks Dr. Ned Hill and Kathryn Kelley of the Ohio State University's Ohio Manufacturing Institute, the staff of the Ohio Department of Development, and the staff of the Ohio Environmental Protection Agency for their assistance with data collection, validation, and review for this publication.

Contact the OMA at **(800) 662-4463** or **oma@ohiomfg.com**.

TABLE OF CONTENTS

This publication draws on datasets from various sources, including the U.S. Department of Labor's Bureau of Labor Statistics and the U.S. Department of Commerce's Bureau of Economic Analysis. Data reported on similar variables will vary slightly from table to table if they are derived from different sources. Reporting years may also vary from table to table if the collection and release schedules for their source datasets are different. Some public datasets are updated retroactively, changing values for previous years; this may cause apparent data mismatches across Manufacturing Counts publications from different years. Each table is internally consistent because the values are from the same dataset.

Table 2: Ohio Gross Domestic Product (GDP) by Sector (as of 2024 in Billions USD and Percentage)

FACT:

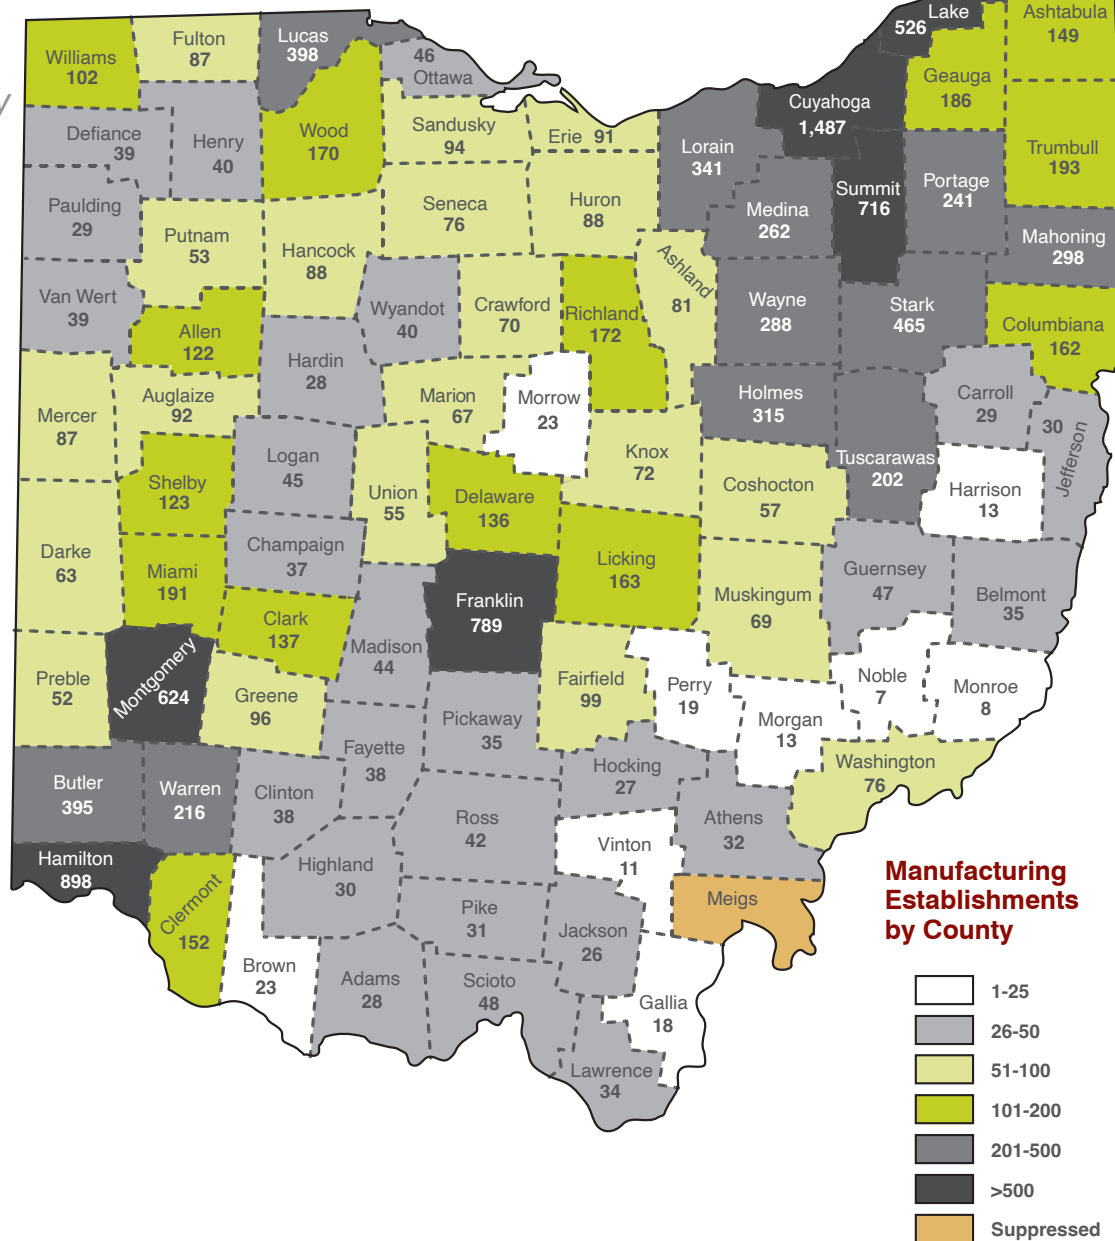

At 16.5%, the manufacturing sector retained a significant lead in contribution to Ohio's GDP in 2024 across all private industries.

Sector	Contribution to Ohio GDP	Percentage of Ohio GDP
All Industry Total	\$927.7	100.0%
All Private Industries	\$836.0	90.1%
Manufacturing	\$137.9	14.9%
Real estate and rental and leasing	\$108.7	11.7%
Finance and insurance	\$102.8	11.1%
Health care and social assistance	\$79.6	8.6%
Retail trade	\$61.2	6.6%
Wholesale trade	\$57.1	6.2%
Professional, scientific, and technical services	\$52.5	5.7%
Construction	\$38.2	4.1%
Transportation and warehousing	\$29.6	3.2%
Administrative and support and waste management and remediation services	\$28.5	3.1%
Management of companies and enterprises	\$28.1	3.0%
Accommodation and food services	\$25.6	2.8%
Information	\$21.2	2.3%
Other services (except government and government enterprises)	\$19.9	2.1%
Utilities	\$16.0	1.7%
Arts, entertainment, and recreation	\$9.3	1.0%
Educational services	\$7.6	0.8%
Agriculture, forestry, fishing and hunting	\$6.2	0.7%
Mining, quarrying, and oil and gas extraction	\$6.0	0.6%

OHIO MANUFACTURING AND THE STATE ECONOMY

Figure 2: Map of Manufacturing Establishment Density by County (as of 2023)

Source: U.S. Department of Commerce

FACT:

Approximately 50% of Ohio's 13,307 manufacturing establishments in 2023 were in ten manufacturing-dense counties: **Cuyahoga** (11.2%), **Hamilton** (6.8%), **Franklin** (5.9%), **Summit** (5.4%), **Montgomery** (4.7%), **Lake** (4.0%), **Stark** (3.5%), **Lucas** (2.99%), **Butler** (2.97%), and **Lorain** (2.6%).

Table 3: Number of Ohio Manufacturing Investment Projects¹

Year Announced	Number of Total Qualifying Projects in Ohio	Number of Manufacturing Projects in Ohio	Percentage Manufacturing Projects in Ohio
2023	539	222	41.2%
2022	479	223	46.6%
2021	501	260	51.9%

Table 4: Jobs and Value of Ohio Manufacturing Projects by Year

Year Announced	Number of New Jobs Expected at Announcement	Value of Manufacturing Investment Projects (in Billions USD)		
		New	Expansion	Total
2023	11,278	\$2.5	\$5.1	\$7.7
2022	20,333	\$26.1	\$6.5	\$32.6
2021	13,454	\$3.4	\$2.6	\$5.9

Table 5: Number of Ohio Manufacturing Projects by Subsector
(ranked based on 2023 values)

Rank	Manufacturing Subsector	2023	2022	2021
1	Fabricated Metal Products	34	25	35
2	Foods and Beverages	29	42	32
3	Machinery	28	22	27
4	Plastic and Rubber Products	27	26	35

14	Paper and Related Products	3	6	10
15	Furniture and Related Products	3	2	5
16	Printing and Support	3	2	3
17	Petroleum and Coal Products	0	4	2

FACT:

Manufacturing projects announced in 2023 were expected to produce 11,278 new jobs. Usually about half of Ohio's new qualifying projects are in the manufacturing sector.

¹To qualify for listing in the Ohio Department of Development's Private Investment Survey, projects must meet at least one of three criteria:

1) minimum investment of \$1,000,000, 2) new square footage of 20,000 or more, or 3) job creation of 20 or more (however, projects with no investment and no square footage data do not qualify). Projects are generally credited to the year they are announced.

Source: U.S. Department of Labor

FACT:

Ohio manufacturing employment averaged about 680,000 jobs per month in 2024 — roughly a 3.4% increase over the COVID-19 lockdown-era averages (2020 and 2021).

Table 10: Ohio Jobs by Sector (as of 2023)

FACT:

Approximately 14.4% of Ohio's jobs were in manufacturing in 2023. Health care and social assistance was the only private sector with a greater number of jobs.

Rank	Sector	Number of Annual Jobs	Percentage of Ohio Jobs
Total, all private industries		4,757,108	100.0%
1	Health care and social assistance	818,108	17.2%

Figure 4: Distribution of Ohio Manufacturing Establishments by Size (as of 2023)

Source: U.S. Department of Commerce

FACT:

While manufacturing firms include many of Ohio's largest private employers, most manufacturers are smaller employers, with 88% employing fewer than 100 associates.

Table 14: Ohio Manufacturing Establishment Size and Employment (as of 2023)

Number of employees	Number of Establishments	Total Number of Employees in Establishments	Percentage of Total Ohio Manufacturing Employees in Establishments
Fewer than 10	5,987	22,907	3.3%
10 - 19	2,112	28,859	4.2%
20 - 49	2,401	75,707	11.0%
50 - 99	1,254	88,418	12.8%
100 - 249	1,015	155,835	22.6%
250 - 499	339	116,044	16.9%
500 - 999	146	97,144	14.1%
1000+	53	104,219	15.1%
Total	13,307	689,133	100.0%

Source: U.S. Department of Commerce

FACT:

Though small manufacturing establishments were most numerous in Ohio in 2023, 39.5% of employees worked at mid-sized manufacturing facilities (100-499 employees). Manufacturers with 100-249 employees had the most total employees at 155,835.

OHIO MANUFACTURING AND THE GLOBAL ECONOMY

**Table 21: Top Ten States
Ranked by Total Exports
(in Billions USD)**

FACT:

In 2023, Ohio was the tenth-largest exporting state, with industrial machinery continuing to be the top exported good.

This series covers direct exports only. A direct export consists of final goods shipped to a destination outside of the United States. So-called indirect exports are excluded from the data. Indirect exports are typically intermediate goods, parts, or other inputs that are shipped within the United States, and subsequently incorporated in final export goods. Such shipments represent domestic transactions – they are not considered exports in U.S. trade statistics.

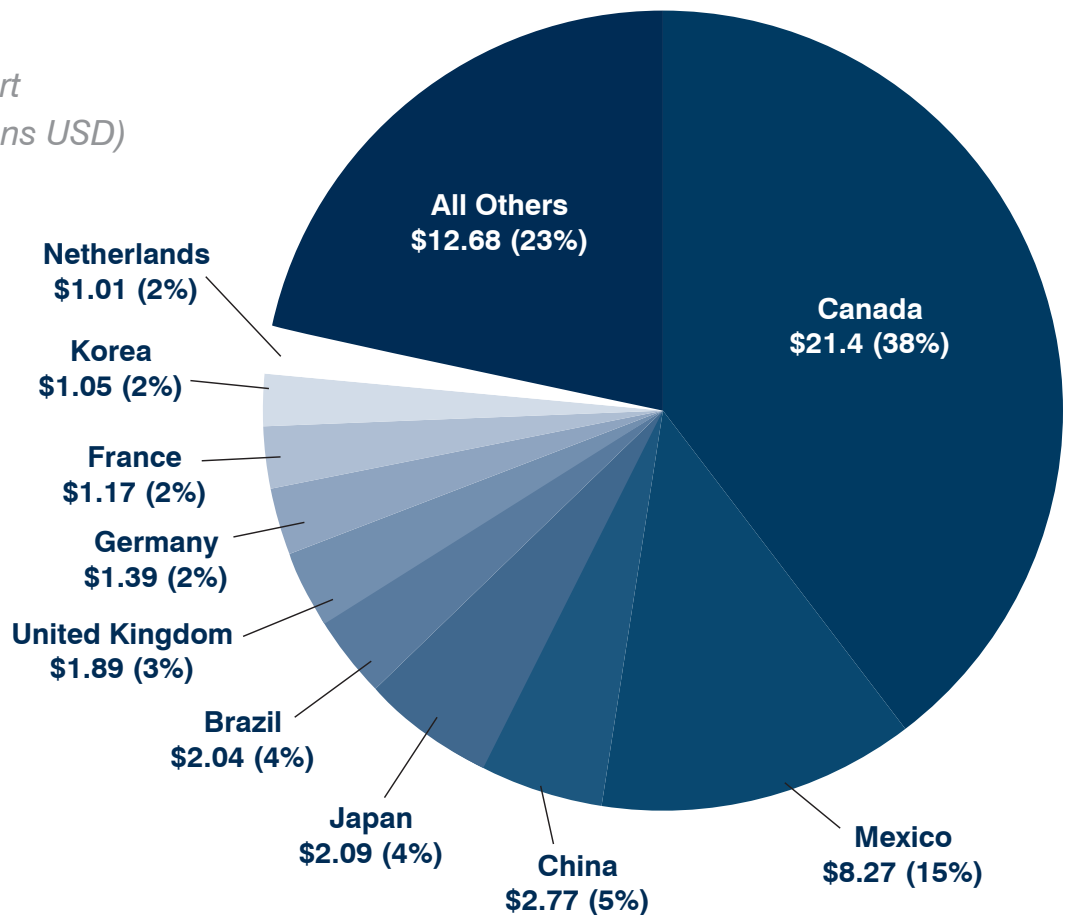

Rank	2023		
	State	Exports	Top Export
1	TX	\$444.6	Mineral Fuel, Oil, etc.
2	CA	\$178.7	Electric Machinery
3	LA	\$100.2	Mineral Fuel, Oil, etc.
4	NY	\$97.8	Prec. Stones; Jewelry
5	IL	\$78.7	Industrial Machinery
6	FL	\$68.9	Electric Machinery
7	MI	\$64.9	Vehicles and Parts
8	WA	\$61.2	Aircraft and Parts
9	IN	\$56.1	Pharmaceutical Products
10	OH	\$55.8	Industrial Machinery

Rank	2022		
	State	Exports	Top Export
1	TX	\$487.4	Mineral Fuel, Oil, etc.
2	CA	\$186.2	Electric Machinery
3	LA	\$121.4	Mineral Fuel, Oil, etc.
4	NY	\$109.5	Prec. Stones; Jewelry
5	IL	\$78.7	Industrial Machinery
6	FL	\$67.7	Electric Machinery
7	MI	\$61.4	Vehicles and Parts
8	WA	\$61.2	Aircraft and Parts
9	OH	\$56.8	Industrial Machinery
10	IN	\$45.3	Pharmaceutical Products

OHIO MANUFACTURING AND THE GLOBAL ECONOMY

**Figure 7: Ohio's Top
10 International Export
Destinations (in Billions USD)**

Source: Ohio Department of Development

FACT:

In 2023, Ohio exported \$55.8 billion in goods to 210 countries and territories, a 1.8% decrease in value from 2022. For comparison, U.S. exports overall experienced a decrease of 2.2% from 2022 to 2023. Over half of Ohio's exports went to Canada and Mexico, as they usually do.

**Table 22: Ohio's
Top Manufactured
Export Commodities**

FACT:

- Industrial machinery again led Ohio's exports at 17.2% of the total in 2023 – valued at \$9.6 billion. Ohio was fifth among states in this category with 4.1% of the U.S. total.
- Ohio's top five export categories (industrial machinery, vehicles, aircraft, electric machinery, and plastics) accounted for 54.2% (\$30.3 billion) of state total exports.
- Ohio widened its national lead in exports of soaps, cleaning preparations, and waxes to 17.3% of U.S. total – and its national lead in paints, dyes, and putty to 9.3%.
- Cosmetics, perfumery, and essential oils exports increased 15.4% in 2023, bringing Ohio to second in the nation in that category.

Commodity	2023			2022	
	State Rank	Exported Goods (in Billions USD)	Percent of All Ohio Exports	Exported Goods (in Billions USD)	Percent of All Ohio Exports
Industrial Machinery, Including Computers	5	\$9.6	17.2%	\$8.7	15.4%
Vehicles and Parts	7	\$8.6	15.4%	\$8.4	14.8%

2023	4,665,245	6,388,552	11,053,797	29.5	67.3	43.7

Source: Ohio Environmental Protection Agency

FACT:

Industry broadly continues to lead the way in solid waste reduction and recycling. The manufacturing sector is also an enormous consumer of recycled materials, including metals, glass, paper, and plastics, which drives demand for products from recycling systems in Ohio and across the United States.

Reduction and recycling include source reduction activities, reuse, recycling, composting and incineration. Ohio's 52 Solid Waste Management Districts (SWMDs) survey businesses yearly about the amount and type of materials being recycled. This yields a statewide picture of recycling trends and opportunities.

Since 2020, Ohio no longer sets a solid waste recycling goal for the industrial sector. As a result, some SWMDs have stopped surveying the sector, likely resulting in a decrease in material being reported. Year-to-year changes may vary based on economic factors – and on response rates to SWMD district surveys since reporting is voluntary. Consequently, the Ohio Environmental Protection Agency (EPA) generally focuses on trends over several years when evaluating changes in recycling activity rather than changes from one year to the next.

The Ohio EPA offers grants, technical assistance and recognition to businesses that want to increase recycling or develop markets for recycled products. Their online platform, the Ohio Materials Marketplace, provides Ohio businesses a venue to advertise and acquire scrap and by-product materials that might otherwise be destined for landfills.

² The OMA uses the term “supersector” to describe the large categories of “residential/commercial” and “industrial.”

Table 24: Total Industrial Facility Emissions by Type and Year (in tons)

Year	Sulfur Dioxide (SO ₂)	Nitrogen Oxides (NO _x)	Particulate Matter	Organic Compounds	Carbon Monoxide (CO)
1980	2,659,612	690,195	174,250	169,515	329,700

Source: Ohio Environmental Protection Agency

FACT:

In 2023, a major increase interrupted the long downward trend in particulate matter emissions in Ohio. This huge uptick likely reflects the Canadian wildfires that raged during the summer of that year.³

³Dinavahi, S. and Archer, C.L. Air quality in the U.S. during the 2023 wildfire season. *Bull. of Atmos. Sci. & Technol.* 6, 6 (2025). <https://doi.org/10.1007/s42865-025-00093-2>

Source: U.S. Environmental Protection Agency

FACT:

Ohio's toxic releases have been on a downward trend across the board for decades.

The U.S. Environmental Protection Agency requires an annual Toxic Release Inventory from facilities. Chemicals can be added or delisted in any year. Thus, base year core chemical amounts vary.

SOURCES AND METHODOLOGY

Most tables and figures in this publication are derived from publicly available datasets and reports. All sources used were the most recent available when creating the final draft of this publication. Some sources were used to develop multiple tables and figures by sorting at different geographic or sectoral levels, and these sources are noted below.

Sectors, Subsectors, and Industries

Throughout this document, we use terms like “industry” and “sector” frequently. These terms are based on the North American Industry Classification System (NAICS) from the U.S. Department of Commerce’s Census Bureau. NAICS uses a hierarchical structure, with national industries at the lowest level (6 digits) nesting all the way up to sectors at the highest level (2 digits). Most of the analysis within this document is conducted at the sector and subsector level. When discussing “sectors”, the OMA is referring to the 19 nongovernment 2-digit sectors described in the NAICS. When describing “subsectors”, the OMA uses the 21 3-digit manufacturing subsectors described in the NAICS. However, we combine the following subsectors to create a set of 17 manufacturing subsectors:

Food and Beverages comprises two combined subsectors: Food Manufacturing (NAICS 311) and Beverage and Tobacco Product Manufacturing (NAICS 312). Textiles, Apparel, and Leather comprises four combined subsectors: Textile Mills (NAICS 313), Textile Product Mills (NAICS 314), Apparel Manufacturing (NAICS 315), and Leather and Allied Product Manufacturing (NAICS 316).

Ohio Department of Development, Office of Research, Private Investment Survey

- Tables 3, 4, 5

Ohio Department of Development, Office of Research, Ohio Export Report

- Tables 21, 22; Figure 7

U.S. Department of Commerce, Bureau of Economic Analysis, SAGDP2 Gross domestic product (GDP) by industry in current dollars

- Tables 1, 2; Figure 1

U.S. Department of Commerce, Bureau of the Census, County Business Patterns

- Tables 13,14; Figures 2, 4

U.S. Department of Labor, Bureau of Labor Statistics, Quarterly Census of Employment and Wages

- Tables 6, 7, 8, 9, 10, 11, 15, 16, 17, 18, 19, 20; Figures 3, 5, 6

Table 23: Solid Waste Reduction and Recycling by Supersector

Annual District Reports can be accessed via the Ohio Environmental Protection Agency’s (EPA’s) Office of Environmental Innovation Solid Waste Management page. Data for this table are obtained from the relevant year’s SWMD Disposal, Recycling, and Generation Report on the page below:

<https://epa.ohio.gov/divisions-and-offices/environmental-innovation/solid-waste-management-planning/annual-district-reports>

Table 24: Total Industrial Facility Emissions by Type and Year

Facility emissions for 1980 were derived from a 1995 Ohio EPA publication, “Emission Trends Report for Stationary Air Contaminant Sources within the State of Ohio 1980-1990.” Emissions data for 2010 and later are calculated from information provided to Ohio EPA from Title V and Synthetic Minor permitted facilities and can be accessed via the Ohio EPA Emissions Inventory System (EIS) at:

<https://epa.ohio.gov/divisions-and-offices/air-pollution-control/reports-and-data/download-eis-data-and-reports>

It is difficult to compare historical and current figures due to changes in how the emissions data are reported. Particulate matter (PM) emissions in 1980 accounted for filterable particulate matter only. PM emissions from 2010 onward accounted for filterable and condensable particulate matter. The PM reduction from 1980 emissions would have been significantly larger if the condensable fraction was inventoried. Only volatile hydrocarbon compounds (VOCs) were included in the 1980 inventory. Both VOCs and organic compounds (OCs) were inventoried from 2010 onward; VOCs are a fraction of OCs. For illustration purposes, the 1980 report assumed VOCs emissions and OC emissions were equal. The OC reduction from 1980 emissions would have been significantly larger if the OC emissions were inventoried alongside the VOC emissions. The number of facilities included in the Ohio EPA’s EIS varies from 1980 to 2010 and later. In 1980, only large emission units were inventoried. In 2010 and later, emission units with greater than one ton for any of the criteria pollutants were inventoried.

Table 25: Ohio Emissions Concentrations by Type and Year

Ozone reported is the highest annual 4th-highest daily maximum eight-hour concentration of O₃ across Ohio’s O₃ monitoring sites. Sulfur dioxide reported is the highest annual average concentration of SO₂ across Ohio’s SO₂ monitoring sites. Particulate matter of less than 2.5 microns reported is the highest annual average concentration of PM_{2.5} across Ohio’s PM_{2.5} monitoring sites. These measures can be found in the Ohio EPA’s Annual Air Quality Reports, available by following the link below:

<https://epa.ohio.gov/divisions-and-offices/air-pollution-control/reports-and-data/air-monitoring>

Table 26 (and 27): Total Industrial Release of 1988 (and 2001) Core Chemicals by Type and Year

Data for these tables can be accessed via the U.S. EPA’s Toxics Release Inventory (TRI) Tracker by following the link below:
